CLAIMS

We claim:

Suf	3 BI7	1. A system for managing concurrent scheduled or on-demand
	2	replication of subscriptions for different user credentials
	3	within a workflow, enterprise and mail-enabled web
	4	application server and platform, comprising:
	5	a database for storing user passwords;
	6	a plurality of subscriptions, each identified by a
	7	subscription user credential including password, user
	8	name and authenticatable electronic certificate;
	9	a service manager for executing concurrent replication
	10	of a plurality of said subscriptions on schedule or
	11	demand for which a password corresponding to said
	12	subscription credential has been provided by a user or
	13	found in said database. \setminus
	1	2. A system for managing concurrent replication of
	2	subscriptions within a workflow, enterprise and mail-enabled

web application server and platform, comprising:

3

4	a plurality of web-enabled, offline subscriptions each
5	identified by user credentials including user
6	identifier and subscription password:

- a service manager for displaying to a user a plurality of said subscriptions, for enabling user selection of replication parameters for each said subscription, and for maintaining replication schedules for said subscriptions; and
- a utility responsive to user input for concurrently replicating on schedule or demand subscriptions for which said user has entered a user password matching said subscription password.
- 3. The system of claim 2, said service manager further displaying disk space usage for enabling user limitation of usage or removal of said subscription.
- 4. The system of claim 2, wherein said plurality of web enabled, offline subscriptions are from multiple servers and from multiple user identities, and selectively having separate database groupings and synchronization rules and properties.

1	<i>\$</i> .	The system of claim 2, further comprising
2	\	a user password database for optionally storing said
3		user password for each of said plurality of
4		subscriptions; and
5		said tility being selectively responsive to a matching
6		user password in said password database for replicating
7		a corresponding subscription and responsive to no
8		matching user password in said password database for
9		prompting for user input of said user password before
10		replicating said corresponding subscription.
1	6.	A method for managing concurrent replication of
2	subso	criptions within a workflow, enterprise and mail-enabled
3	web a	application server and platform, comprising the steps
4	of:	
5		storing user passwords in a password database;
6		associating a subscription password with each of a
7		plurality of subscriptions;
8		executing concurrent replication of a plurality of said
9		subscriptions on schedule or demand for which a
	LOT9	2000 0006 US1 142

10	password corresponding to said subscription password
11	has been provided by a user or found in said database.
1	7. A program storage device readable by a machine,
2	tangioly embodying a program of instructions executable by a
3	machine to perform method steps for managing concurrent
4	replication of subscriptions within a workflow, enterprise
5	and mail-enabled web application server and platform, said
6	method steps comprising:
7	storing user passwords in a password database;
8	associating assubscription password with each of a
9	plurality of subscriptions;
10	executing concurrent replication of a plurality of said
11	subscriptions on schedule or demand for which a
12	password corresponding to said subscription password
13	has been provided by a user or found in said database.
1	8. A system for issuing user dentifiers for subscriptions
2	in a workflow, enterprise and mail-enabled application
3	server and platform, comprising:
4	a database of security domains; $igwedge$

LOT9 2000 0006 US1

5	\	system electronic certificates for authenticating user
6		credentials;
	\	
7	'	a tool responsive to said database and said
8		dertificates for distributing user identifiers
9		selectively based upon security domain through auto
10		generation, directory lookup or user prompt.
1	9.	The system of claim 8, further comprising:
2		an identifier repository database;
3		a security domain document in said database of security
4		domains for use in locating in said identifier
5		repository database a user identifier selected for
6		distribution based upon directory lookup.
1	10.	The system of claim 8, further comprising:
2		a security domain document from said database of
3		security domains for specifying an electronic
4		certificate for use in auto generating a user
5		identifier selected for dstribution based upon auto
6		generation.

.

1	1.	The system of claim 8, further comprising:
2		prompt code for execution in response to a need for a
3		user entered user identifier.
1	12.	The system of claim 8, further comprising:
2		a security model for enabling the distribution of
3		previously deployed user identifiers by table lookup.
1	13.	The system of claim 9, further comprising:
2		prompt code for execution in response to a need for a
3		user entered user identifier; and
4		a security model for enabling the distribution of
5		previously deployed user identifiers by table lookup.
1	14.	A method for issuing vser identifiers for subscriptions
2	in a	workflow, enterprise and mail-enabled application
3	serv	er and platform, comprising the steps of:
4		providing a database of security domains;
5		responsive to said database, distributing user
	LOT9	2000 0006 US1 145

	`	
6		identifiers selectively based upon security domain
7		through auto generation, directory lookup or user
8	/	prompt.
1	15.	The method of claim 14, further comprising the steps
2		of:
3		providing an identifier repository database of user
4		identifiers;
5		locating a security domain document in said database of
6		security domains for accessing in said identifier
7		repository database a user identifier selected for
8		distribution based upon directory lookup.
1	16.	The method of claim 14 further comprising the step of:
2		locating a security domain document in said database of
3		security domains for specifying an electronic
4		certificate for use in auto generating a user
5		identifier selected for distribution based upon auto
6		generation.

1 17. The method of claim 14, further comprising the step of:

5

6

2		executing user prompt code response to a need for a
3	/	user entered user identifier.
1	18.	The method of claim 14, further comprising the step of:
2		responsive to a security model, distributing previously
3		deployed user identifiers by table lookup.
1	19.	The method of claim 14, further comprising the steps
2		of:
3		executing prompt code in response to a need for a user
4		entered user identifier; and
5		responsive to a security model, enabling the
6		distribution of previously deployed user identifiers by
7		table lookup.
1	20.	A program storage device readable by a machine,
2	tang	ibly embodying a program of instructions executable by a
3	mach	ine to perform method steps for issuing user identifiers

comprising:

for subscriptions in a workflow, anterprise and mail-enabled

application server and platform, said method steps

7.	providing a database of security domains;
8	responsive to said database, distributing user
9	identifiers selectively based upon security domain
10	through auto generation, directory lookup or user
11	prompt.
1	21. A computer program product configured to be operable
2	for managing concurrent scheduled or on-demand replication
3	of subscriptions for different user credentials within a
4	workflow, enterprise and mail-enabled web application serve
5	and platform, according to the steps of:
6	storing user passwords in a password database;
7	associating a subscription password with each of a
8	plurality of subscriptions;
9	executing concurrent replication of a plurality of said
10	subscriptions on schedule or demand for which a
11	password corresponding to aid subscription password
12	has been provided by a user or found in said database.
1	22. A computer program product configured to be operable
2	for issuing user identifiers for subscriptions in a

LOT9 2000 0006 US1

3	workflow, enterprise and mail-enabled application server and
4	platform, according to the steps of:
5	providing a database of security domains;
6	responstve to said database, distributing user
7	identifiers selectively based upon security domain
8	through auto generation, directory lookup or user
9	prompt.
